

Access or control your product from  
anywhere in the world.

MicroWeb can enhance your product so  
that it can be accessed from anywhere in  
the world. using the Internet, wireless or  
wired technology.

- Tech support and diagnostics can be  
done remotely.
- Have your product request service  
when it needs it.
- Collect data on your products  
remotely.
- Add long distance remote control  
capability to your product.

Electronic  
product  
development  
you can trust

Need some help with your electronic product development?

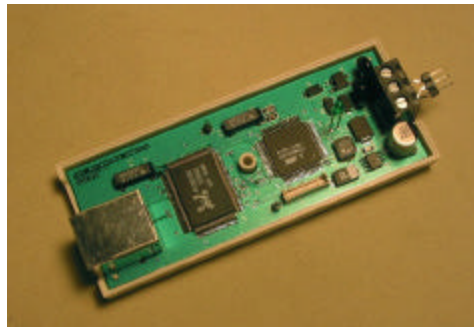

Starting from scratch can be time consuming and expensive.

- ✓ Do you have a product that needs a new competitive edge?
- ✓ Do your customers want your product to be tied to their network?
- ✓ Would your customers buy more if they could control or check on your product over the Internet?
- ✓ Are you looking for a fast, low-risk way to get electronic design work done?

If so, then MicroWeb Engineering can help solve your problems!

MicroWeb Engineering specializes in remote monitoring and control using:

- Embedded web server
- Telephone access
- Wired serial protocols
- Microcontroller designs
- Digital and analog hardware designs
- Firmware and software to make it all work with your products
  - Test software
  - Production software
- Fast prototypes done on etched PC boards, so you can see what you're getting.

What can I expect from MicroWeb Engineering?

1. An honest estimate up front, on both cost and schedule.
2. Frequent updates on the progress of your project.
3. Excellent design work, balanced with common sense.
4. The flexibility to work with the customer's employees to tackle integration challenges.
5. A commitment to finish the job.
6. An affordable, low-risk way for me to get my electronic design work done.

Contact us today!

We'll sit down with you, listen to your development needs, and give you an honest estimate to complete the job.
